MONTHLY UPDATE REPORT - PRIMROSE SOUTH 09-21-067-04 W4M

JULY 22 TO AUGUST 18, 2014

1 Introduction

The Canadian Natural Resources Limited Primrose South in situ oil sands project is located in the Cold Lake Air Weapons Range approximately 65 km north-northeast of Bonnyville, Alberta. Canadian Natural operations staff discovered a bitumen emulsion flow to surface (FTS) area at 09-21-067-04 W4M on June 24, 2013. The bitumen emulsion FTS area is beneath an unnamed water body within the Canadian Natural Primrose South production area.

On September 24, 2013, Alberta Environment and Sustainable Resource Development (ESRD) issued an Environmental Protection Order (EPO No. EPO-2013-33/NR), requesting the preparation of a Comprehensive Remedial Plan (CRP), as well as the preparation of a monthly progress report. This report addresses that requirement and summarizes the progress towards the realization of the CRP and includes data collected and reported between July 22 and August 18, 2014.

2 Summary of Activities to Date

2.1 Individual Plan Submissions

As required by the EPO, the CRP includes the development, submission, and implementation of several specific plans. The status of these plans is indicated in Table 1:

Table 1: Components of the Comprehensive Remedial Plan

Item	Plan Name	Due Date	Submission Date	Approval Date	Implementation Start Date	Completion Date	Section Discussed
1.	**Water Management Plan for Dewatering**	September 26, 2013	September 26, 2013	September 27, 2013	September 27, 2013	October 22, 2013	2.2
2.	**Water Body Monitoring Plan**	September 26, 2013	September 26, 2013	September 27, 2013	September 27, 2013	Ongoing	3.0
3.	**Erosion and Sedimentation Prevention Plan**	September 26, 2013	September 26, 2013	September 27, 2013	September 27, 2013	Ongoing	3.4
4.	**Phase II Environmental Assessment Plan**	October 15, 2013	October 3, 2013	October 17, 2013	December 16, 2013	Ongoing	--
5.	**Bitumen Emulsion Delineation and Containment Plan**	October 6, 2013	October 3, 2013	October 17, 2013	October 18, 2013	Ongoing	3.5
6.	**Amphibian Salvage Plan**	September 26, 2013	September 25, 2013	September 27, 2013	September 27, 2013	October 22, 2013	Complete
7.	**Fish and Fish Habitat**	September 26, 2013	September 25, 2013	September 27, 2013	September 27, 2013	October 30, 2013	Complete

Item	Plan Name	Due Date	Submission Date	Approval Date	Implementation Start Date	Completion Date	Section Discussed
	Assessment Plan						
8.	**Wetlands Impact Assessment Plan**	September 30, 2013	September 25, 2013	September 27, 2013	September 27, 2013	October 30, 2013	Complete
9.	**Water Body Restoration Plan**	November 30, 2013	Revised Plan March 27, 2014	March 27, 2014	March 27, 2014	Ongoing	2.2, 3
10.	**Wildlife Management Plan**	N/A	Revised Plan October 23, 2013	October 23, 2013	October 23, 2013	Ongoing	3.6
11.	**Waste Management Plan**	N/A	Revised Plan October 24, 2013	October 24, 2013	October 24, 2013	Ongoing	3.7
12.	**Bitumen Emulsion Delineation and Containment Plan**	October 6, 2013	Revised Plan December 22, 2013	February 7, 2014	November 27, 2013	Pending	3.5

2.2 Water Management for Dewatering and Refilling

Activities related to dewatering and refilling were completed on June 22, 2014. No new information to report.

3 Water Body Monitoring

In accordance with the Water Body Restoration Plan (Table 1, Item 9), an extensive water quality and water quantity monitoring program was implemented on March 19, 2014. This program complements the ongoing water quality and quantity monitoring implemented in June 2013.

Details of the monitoring program are provided in the following subsections.

3.1 Water Quantity Monitoring

3.1.1 Basins 1, 3, and 4, Borrow Pit, and Downstream Fen

Daily staff gauge monitoring was initiated on March 27, 2014, coinciding with spring breakup. Staff gauge and water level monitoring locations are shown on Figure 2. Staff gauge readings for Basins 3 and 4 are in Appendix A1, and readings for the downstream fen and the borrow pit are in Appendix A2.

3.1.2 Containment Structure

Water was pumped from inside the containment wall back into Basin 1 (Figure 3). Water volumes pumped into Basin 1 from the containment area are shown in Appendix A3 and on Appendix A4.

3.2 Water Quality Monitoring

Weekly water sampling was initiated March 19, 2014. Water quality was compared to the *Alberta Tier 1 Soil and Groundwater Remediation Guidelines* (ESRD 2014a) and/or *Environmental Quality Guidelines for Alberta Surface Waters* (ESRD 2014b). Sampling locations are shown on Figure 4.

3.2.1 Basins 1, 3, and 4 and Downstream Fen

Water quality samples were collected weekly from the surface water sampling sites in Basins 1, 3, and 4 and the downstream fen (Figure 4). The samples were tested to ensure that water quality in the water body was not being affected by ongoing operations at the site. Water quality results are in Appendix B.

- Laboratory analysis of water samples was carried out for benzene, toluene, ethylbenzene, and xylenes (BTEX); petroleum hydrocarbons (PHCs) fraction 1 (F1; C_6-C_{10}, excluding BTEX), fraction 2 (F2; $C_{>10}$-C_{16}), fraction 3 (F3; $C_{>16}$-C_{34}), and fraction 4 (F4; $C_{>34}$); polycyclic aromatic hydrocarbons (PAHs), chlorides; total suspended solids; and turbidity.

- All water quality results were within guidelines except toluene, which was found on at least one, and up to four locations on four separate sampling dates in the surface water. Toluene is widespread in the environment and a common source is motor vehicle exhaust. The recurring occurrence of toluene is currently being investigated.

3.2.2 Containment Area, Containment Cells, and Potentially Impacted Water System

Water samples were collected from within the containment structure, from shallow groundwater monitoring wells in the discharge area, and from a system, which is used to treat water and sediments stored in containment Cells C and D. Sample results are presented in Appendix B.

- No BTEX, PHCs F1 to F4, PAHs, or routine parameters were detected at levels above guidelines in the weekly containment structure samples from Swale 1.

- No BTEX, PHCs F1 to F4, PAHs, or routine parameters were detected at levels above guidelines in the shallow groundwater samples from the discharge area.

- A total of 1,953 m^3 of water has been treated and released during the reporting period.

3.2.3 Shallow Groundwater

Shallow groundwater quality samples were collected on July 29, August 5, and August 12, 2014.

All water quality results were within guidelines with the exception of three toluene measurements recorded in drive point well 13-DP1.

3.3 Aquatic Surveillance

Daily monitoring for signs of bitumen emulsion (pellets or sheen) within Basins 1 and 3 is conducted and documented by Canadian Natural contractors. This monitoring is conducted by walking the shoreline of the water body and by boat.

Sheen and bitumen pellets were observed intermittently during the reporting period. The locations of these occurrences are shown on Figure 5. The source of the sheen and pellets was small amounts of material that were not cleaned from the water and sediment after the original bitumen emulsion release. All observed bitumen emulsion pellets and sheen were collected, using absorbent material, and disposed in the onsite hazardous waste bin. Over the reporting period, less than 0.5 L of bitumen emulsion has been collected from Basins 1 and 3.

3.4 Erosion and Sedimentation Prevention

The refilling activities were completed in accordance with the conditions specified in Extension 4 of the Water Body Restoration Plan (Table 1, Item 9).

- The fen to the south of the water body showed no signs of erosion or channelization during water body refilling.
- The erosion and sediment control plan has been implemented.

3.5 Bitumen Emulsion Containment

3.5.1 Permanent Containment of Bitumen Emulsion Seepage from Fissure

In early May 2014, the fissure containment structure (FCS) was approved. A Canadian Natural construction crew built the fissure containment structure between May 4 and June 30, 2014. Following discussion with AER and ESRD, a revised design of the access pad was prepared and submitted to AER and ESRD for review and approval.

3.6 Wildlife Management

Wildlife management activities between July 22 and August 18, 2014 included removing perimeter fencing; installing, maintaining, and frequently relocating up to four wildlife scare cannons (Zon Guns); installing and maintaining amphibian pit fall traps surrounding decontamination Cell D and conducting daily inspections.

During the reporting period, live tadpoles and frogs were observed within Cell D and relocated to a nearby water body, and one dead frog was found in Basin 1 of the 9-21 water body.

3.7 Waste Management

Transportation of materials temporarily stored in lined containment Cells C and D to the Tervita Bonnyville landfill for disposal started in August 2014. Transportation for disposal is ongoing as the material is thawed and dewatered to meet landfill criteria.

Decommissioning of the former lined heavy-equipment decontamination cell was completed in July in accordance with the Waste Management Approval.

3.8 Annual Bitumen Surveillance

An annual surveillance program to identify possible presence of other FTS areas in the Primrose South operations areas was undertaken in July 2014. The July program consisted of ground reconnaissance within a 2-km area around the 9-21 site conducted by traversing existing seismic lines on quad and ARGO ATVs. A total of 220 km of seismic lines were traversed within an area of 11.4 km^2 surrounding the 9-21 FTS site. No additional bitumen emulsion FTS sites were found.

4 Conclusions

The work conducted at the 9-21 FTS site from July 22 to August 18, 2014 included:

- conducting an annual bitumen ground surveillance program in a 2 km radius surrounding the 9-21 FTS site
- operating a PIW treatment system at containment Cell D and releasing treated water
- transporting dewatered material from containment Cells C and D to the landfill for disposal
- dewatering from within the containment area
- ongoing monitoring of water quality, pumped quantity, discharge point erosion and sedimentation during remediation activities
- monitoring wildlife activity near the water body

Monitoring of Basins 1 and 3 indicates that there are no adverse impacts related to the bitumen emulsion release or refilling activities.

The work is progressing as planned and the objectives, as required by the EPO, are being achieved within the required time frame.

Notes:

--- - not analyzed

NS - not specified

crop - guideline level is crop dependent; criterion shown is most stringent value

H - dependent on hardness value

Cl - dependent on chloride value

pH - not to be altered by more than 0.5 units from background

LT - long-term exposure guideline; see applicable guidelines for further details

Alk - minimum value, unless natural conditions are less

SO4 - guideline level is hardness dependent; hardness values greater than 250 mg/L need to be determined based on site water

* - Environmental Quality Guidelines for Alberta Surface Waters (ESRD 2014)

Italics - values do not meet applicable guidelines

Notes:

--- - not analyzed

NS - not specified

A - indicates guideline for Aquatic Life exposure pathway

P - indicates guideline for Potable Groundwater exposure pathway

AO - aesthetic objective from *Guidelines for Canadian Drinking Water Quality-Summary Table* (Health Canada 2012)

MAC - maximum acceptable concentration based on health effects from *Guidelines for Canadian Drinking Water Quality-Summary Table* (Health Canada 2012)

* - *Alberta Tier 1 Soil and Groundwater Remediation Guidelines* (AENV 2010)

Italics - values do not meet applicable guidelines

Notes:

ND - not detected

NS - not specified

^{A} - indicates guideline for Aquatic Life exposure pathway

^{P} - indicates guideline for Potable Groundwater exposure pathway

$^{++}$ - carcinogenic PAH compounds

$^{+++}$ - equivalent Benzo[a]pyrene concentrations calculated by Matrix Solutions are based on relative carcinogenic potency

* - *Alberta Tier 1 Soil and Groundwater Remediation Guidelines* (AENV 2010)

** - concentration is determined to be suspect as pyrene was detected in all samples analyzed in Maxxam batch 7479418 (including blanks)

Italics - values do not meet applicable guidelines

^{crop} - guideline level is crop dependent; criterion shown is most stringent value

^{LT} - long-term exposure guideline; see applicable guidelines for further details

* - *Alberta Tier 1 Soil and Groundwater Remediation Guidelines* (AENV 2010)

** - *Environmental Quality Guidelines for Alberta Surface Waters* (ESRD 2014)

Italics - values do not meet applicable ESRD guidelines

Notes:

NS - not specified

^{A} - indicates guideline for Aquatic Life exposure pathway

^{P} - indicates guideline for Potable Groundwater exposure pathway

^{AO} - aesthetic objective from *Guidelines for Canadian Drinking Water Quality-Summary Table* (Health Canada 2012)

^{MAC} - maximum acceptable concentration based on health effects from *Guidelines for Canadian Drinking Water Quality-Summary Table* (Health Canada 2012)

ST - see applicable guidelines for short-term exposure guideline

* - *Alberta Tier 1 Soil and Groundwater Remediation Guidelines* (AENV 2010)

** - Environmental Quality Guidelines for Alberta Surface Waters (ESRD 2014)

Italics - values do not meet applicable ESRD guidelines
